

## **Encon stocks new telephone entry solutions from various manufacturers**

In April, Encon Electronics, the leading wholesale distributor of access control products in the U.S., announced several new products to their already extensive inventory. The DoorKing 1800-080 Cellular Control Box is a cellular add on that's compatible with most DoorKing telephone entry systems including: 1833, 1834, 1835, 1837, and the 1838. By adding the DoorKing 1800-080 unit, dealers can convert existing installations into wireless, cellular based systems. Call Encon for product details, registration information and DKS cellular network subscription fees.

The LiftMaster EL1SS telephone entry is another access control product available at Encon. This system provides wired communication and secure access control at the gate or door. The EL1SS features a stainless steel faceplate, remote open capability, a 200 programmable entry code capacity and more.

Encon announces the heavily anticipated Elika 460 residential telephone entry system. This is the first telephone entry line manufactured by Viking Access Systems, and Encon is excited to offer this new technology to its customers. The 460 model provides wireless communication and with an optional HD video camera upgrade, it can be programmed to stream live video, record video, or take pictures. Encon will stock both the white and silver color options.
